

Capability Statement

DIAL BEFORE YOU DIG®
CERTIFIED
LOCATOR

Company Overview

GMR Enterprises Pty Ltd provides a range of engineering and construction services across multiple industries throughout Australia. We provide support to our clients on minor and major projects, with our main focus being on the underground assets and infrastructure. Our work spans across multiple industries, including telco, power, civil and rail.

GMR can provide value from design scoping and validation, through to construction, commissioning and maintenance. We can offer design input by undertaking field scoping and validation works at different stages of the project. This includes pre-scoping to collect accurate data for base design, as well as detailed field validation to ensure the delivery is providing the intended outputs. Our highly experienced and knowledgeable staff provide solutions-based feedback to our clients to minimise both scope and program, while maximising output and return.

GMR has successfully obtained ISO accreditation in Safety, Quality and Environmental systems management as well as ASP1 accreditation. We are also a listed Dial Before You Dig (DBYD) accredited locator, all of which supplements our fleet of NDD equipment and our potholing and scoping expertise. We are also licenced to manage and transport contaminated waste should it be encountered on the job.

Key Areas

SERVICE LOCATING
